

PROJECT

PAPYRUS

Named from one
of my favorite
characters EVER!
(Hint: he's in
Undertale)

A set of robotic hands!
Made with Arduino
UNO, it simulates finger
movement using string
connected to stepper
motors.

Made by Ekansh Simgekar (15)
from New Jersey

It can rotate, it has
articulation, what can't it
do?? I love robotics, if you
couldn't tell.
