

PROJECT

PAPYRUS

Named from one
of my favorite
characters EVER!
(Hint: he's in
Undertale)

Made by Ekansh Simgekar (15)
from New Jersey

Please, scan for more!

A set of robotic
hands! Made with
Arduino UNO, it
simulates finger
movement using
string connected to
stepper motors.

It can rotate, it has articulation, what can't
it do?? I love robotics, if you couldn't tell.
